

Textbook comparison sheet

Complete one sheet per course. Confirm the required edition and online assignments with your instructor before comparing offers. Use the same currency and access period for every option.

Course / term / instructor:

Required title / author / edition / ISBN / homework platform:

Check	Option A	Option B
Seller / product / format		
Access period and required components		
Book or rental price		
Extra access / tax / delivery / return costs		
Total cash required now		
Possible resale (uncertain); expected net		
Arrival / return / expiry dates		

Calculation and decision

Total paid = material price + required extra access + applicable tax + delivery and return costs. Keep possible resale separate. Compare a rental with an on-time return assumption and record late/damage charges.

Fictional USD example, no extra tax: used \$45 + \$5 delivery + \$70 access = \$120 now; possible \$15 resale gives \$105 net. Rental \$30 + \$5 return + \$70 access = \$105. Digital bundle = \$90.

Chosen option / requirement still to confirm:

Source of requirements: current syllabus, official bookstore and publisher terms. Read the linked Yenra guide for OpenStax and Pearson references.
