

Detecting permission record

Complete this record before planning an outing. It documents your checks and does not grant permission. Confirm access, detector use, ground disturbance, removal, and reporting separately. Keep personal details and precise locations private. Recheck current local rules.

Hypothetical example: a landowner permits surface-only practice inside an agreed boundary. A buried signal remains undisturbed because the permission excludes digging.

Site reference / planned date	
Owner / managing authority	
Official rule URL / date checked	
Permission evidence / contact	
Allowed area / excluded boundaries	
Permits / expiry / closures	
Digging / removal / reporting rules	
Find ownership / restoration terms	
Detector model / manual version	
Conditions / communications / stop plan	

National Park Service: policy topics, metal detectors

Permitted find record

Complete only within the permission and applicable rules for the site. Record identity as pending when uncertain. Leave possible archaeological or hazardous objects undisturbed and seek the appropriate authority. Use this record to preserve observations and reporting details.
